

How Cows Make Milk

1. A cow produces milk but needs to eat a lot of grass and drink a lot of water.

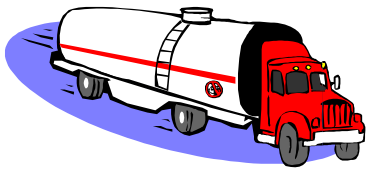

Which other animals produce milk that we can buy?

2. A special machine sucks the milk from a cow. A cow is milked every day. Sometimes a cow is milked by hand.

3. A refrigerated tanker collects the milk. The tanker keeps the milk cold.

4. The milk is then taken to a dairy.

5. At the dairy the milk is heated and cooled quickly. This is called pasteurisation and is used to kill any harmful mi-

6. Machines then pour the milk into cartons and is then taken to the shops.

7. Some milk is used to make butter, yoghurt or cheese.
